Summary

Computer Science graduate (CGPA: 8.22) with software engineering experience developing scalable backend systems, RESTful APIs, database-driven applications, and real-time platforms. Strong foundation in Java, Data Structures & Algorithms, Object-Oriented Programming, Distributed Systems concepts, and software testing. Experienced with Linux environments, Git-based development workflows, CI/CD pipelines, and cloud technologies. Passionate about building reliable enterprise software and solving complex technical problems.

Education

CMR Engineering College

B.Tech in Computer Science and Engineering; CGPA: 8.22/10.0

Devasthaliya Vidyapeeth (CBSE) – Class XII: 73% (2022) | Class X: 83% (2020)

Hyderabad, India

Oct 2022 - April 2026

Technical Skills

Languages: Java, JavaScript, TypeScript, C, SQL

Frontend: Angular, React, HTML5, CSS3, Bootstrap

Backend: Node.js, Express.js, REST APIs

Databases: MySQL, PostgreSQL, MongoDB, Microsoft SQL Server

Core Concepts: Object-Oriented Programming (OOP), Data Structures & Algorithms, Database Management Systems (DBMS), Operating Systems, Relational Database Concepts, Data Modeling, SDLC, SOLID Principles.

Tools & Platforms: Git, GitHub, Docker, CI/CD, Postman

Professional Experience

Devbox Software Pvt. Ltd.

Software Developer Intern

Hyderabad, India

May 2026 – July 2026

- Developed dynamic and responsive web applications using **Angular**.
- Integrated and consumed **REST APIs** within frontend applications.
- Learned and implemented **authentication and authorization** mechanisms, including login and access control workflows.
- Analyzed project requirements and existing codebases to understand application architecture and business logic.
- Assisted in translating UI designs into functional frontend components based on project specifications.
- Reviewed existing modules to understand business requirements and system architecture.

BlackBucks Groups

FullStack Developer Intern

Hyderabad, India

March 2025 – October 2025

- Developed and maintained production-grade applications using Node.js, Express.js, MySQL, and PostgreSQL supporting 500+ concurrent users.
- Designed and implemented 15+ RESTful APIs with optimized database operations, improving response times by 30%.
- Built secure authentication and authorization systems using JWT-based access control.
- Optimized SQL queries and database schemas to improve scalability and performance.
- Collaborated through Git-based workflows, code reviews, and cross-functional project execution.

Social Crafts Circle (Social Craft Circle)

Freelance Software Developer

Remote

January 2026

- Developed and deployed a client-facing web platform using React.js and Tailwind CSS.
- Developed Configured deployment pipelines, custom domains, SSL certificates, and production hosting.
- Optimized application performance and responsiveness across desktop and mobile devices..
- Delivered project milestones successfully while collaborating directly with stakeholders.

Open Source Contributions

GitHub

Open Source Contributor

Remote

Ongoing

- Contributed to 5+ open-source repositories through bug fixes, feature enhancements, API improvements, and documentation updates.
- Worked with collaborative Git workflows including branching, pull requests, issue tracking, and peer reviews.

Projects

Zerodha Clone – Trading Platform (haarish73/ZerodhaClone-Full-stack-Project)

- Developed a full-stack trading platform using React.js, Node.js, Express.js, and MongoDB.
- Built secure authentication and authorization using Passport.js, JWT, and bcrypt
- Applied software engineering principles to improve scalability, maintainability, and system performance.

Project Enrollment System (haarish73/Project-Enrollment-and-Allocation-System)

- Built a real-time project management platform using Socket.io for instant communication and workflow automation.
- Developed scalable backend APIs and database operations for multi-user environments.
- Automated allocation workflows, reducing manual administrative effort and improving efficiency.
- Designed simple and intuitive UI/UX to enhance the user experience

BookMyStay – Hotel Booking Platform | Node.js, Express.js, MongoDB, EJS, Nodemailer

- Developed backend services and CRUD operations using Node.js, Express.js, and MongoDB.
- Implemented modular architecture, authentication workflows, and automated email notification systems..
- Improved application reliability through validation, error handling, and testing practices.

Certifications & Achievements

Certifications: Full Stack Web Dev – MERN Stack (Apna College, Oct 2025) | Foundations of UX Design – Google (Coursera) | DSA with Java (Smart Interviews)

Achievements: Finalist – BOSCH x Tinkerers' Lab Hackathon, IIT Hyderabad (Top 17 of 200+ teams) | CodeChef: harishkhan9 | LeetCode: haarish_khan94
